June is known for the return of three remarkable daytime showers. Major showers Arietids and Zeta-Perseids, peaking respectively on June 7th and June 9th in 2010, are both characterized by a broad maximum (with possible submaxima) and high ZHR value, thus making first half of June one of the best periods of the year for MS-Dxing Even Beta-Taurids, peaking June 28, is characterized by fairly good ZHR. Have a look to shower predictions for June 2010 at our MMM MS Propagation page: www.mmmonvhf.de/ms.php [MMMonVHF]
